

IC-3 and IC-4 Insensitive Fiber Optic Cable

Specification Sheet

Relatively impervious to the effects of vibration and movement, the **IC-3** and **IC-4** insensitive fiber optic cable provides a way to extend the distance between the deployed sensor cable and the Alarm Processor Unit (APU) at distances up to 20 kilometers (12.4 miles).

Insensitive cable is available in two versions, depending upon the application:

- **IC-3** for fence and network applications
- **IC-4** for buried perimeter applications

The **IC-3** insensitive cable is a 3 millimeter diameter cable, and requires insertion into protective conduit prior to deployment for above-ground applications.

The **IC-4** insensitive cable can be buried directly without the use of conduit.

The insensitive cable consists of a standard 9 μm /125 μm single-mode optical fiber protected by a UV-resistant rugged jacket which enables it to survive in harsh, outdoor conditions. The **IC-4** insensitive cable has an additional layer of jacket material for direct burial.

IC-3 insensitive cable (left) and IC-4 insensitive cable (right) shown on continuous reels

Both the FD34x and FD5xx series intrusion detection systems require the use of insensitive lead-in cable.

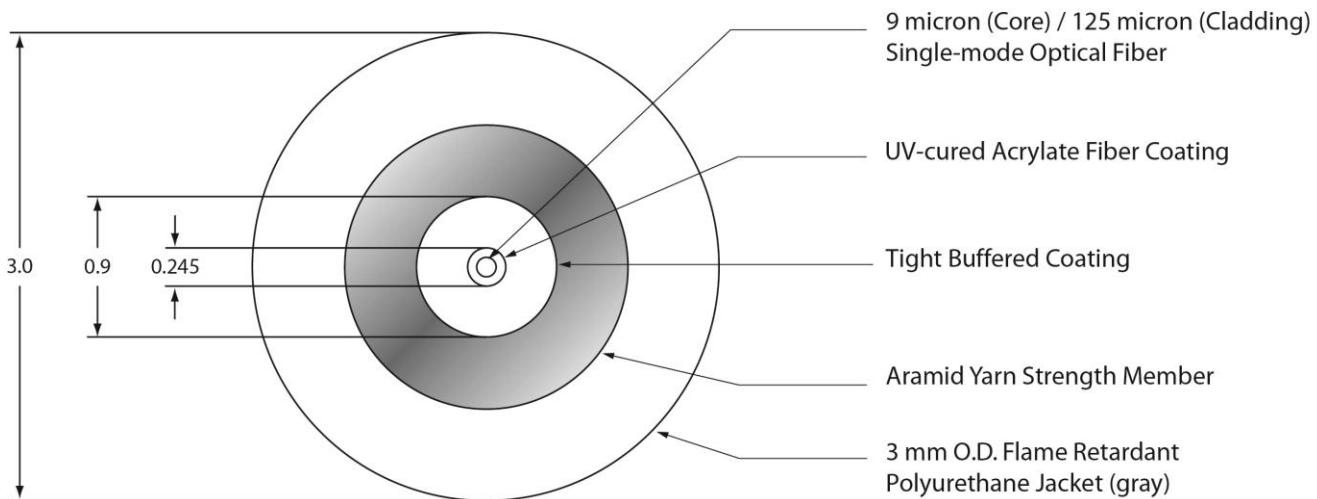

Insensitive lead-in cable is not compatible with the FD322 or FD33x series Alarm Processing Units.

FEATURES	APPLICATIONS
Lead-in cable designed for remote APU deployment Significant distance specifications (up to 20 km) UV-resistant jacketing Buried application deployments Provides maximum design flexibility	Commercial facility perimeters Government & military perimeters Airport perimeters Military secure networks Electric power utilities

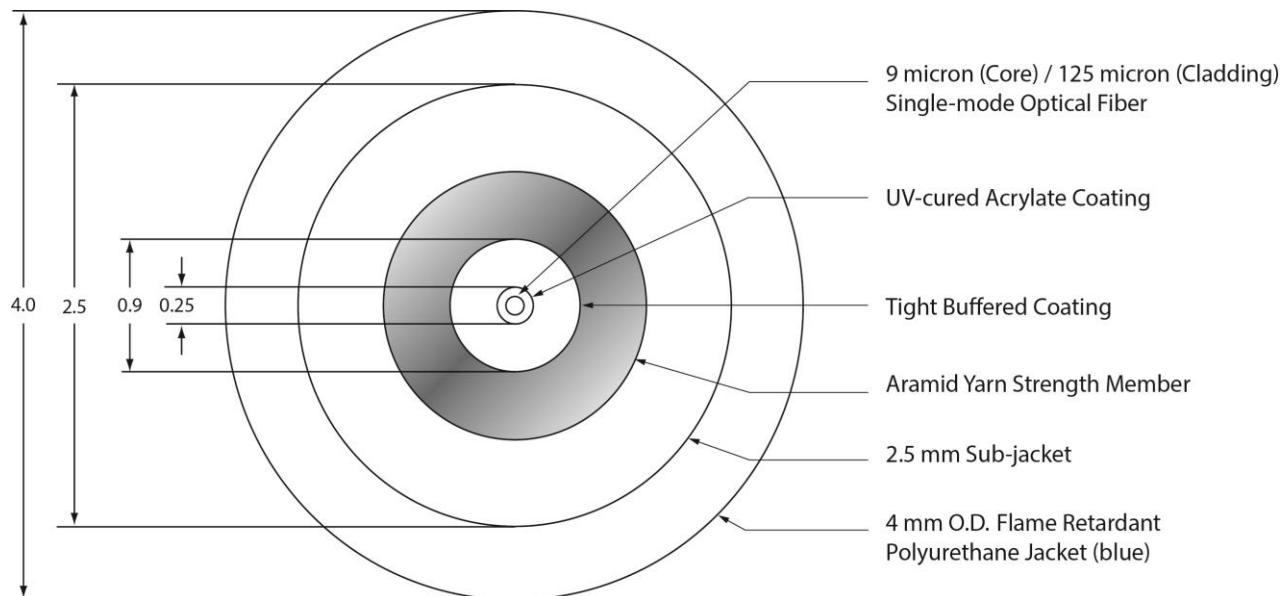

INSENSITIVE CABLE END PROFILE IC-3

Notes:

1. All dimensions in mm unless otherwise noted.
2. Drawing not to scale.

INSENSITIVE CABLE END PROFILE IC-4
